## PROJECTS

---

- **Relation Extraction for Ontology Creation:** Internship project at IBM Research Labs, Bangalore. In this project, we developed an end-to-end model to extract relations between real-world entities from texts for ontology creation. We based our model on On2vec and used TACRED and other industry datasets for evaluation.
- **Generating Knowledge Graph from Wikipedia Infobox:** This is part of my initial work for my PhD thesis work. In this project, I extract all the infobox from the Wikipedia xml dump. Categorize infobox template types in Person, Organization, and Location. Parse all the infobox that falls into one of the category. Also generate list of relations for each of the 3 types. Finally, extract information in the form of triple (e1, r, e2)
- **Packet Filtering Firewall for Linux Kernel:** Course project for DSSD, developed in C/C++ using iptables, netfilter and Linux Kernel module.
